The state of the art in automating usability evaluation of user interfaces

Melody Y. Ivory, Marti A Hearst

December 2001 ACM Computing Surveys (CSUR), Volume 33 Issue 4

window

Publisher: ACM Press

Additional Information: full citation, abstract, references, citings, index terms, review

Usability evaluation is an increasingly important part of the user interface design process. However, usability evaluation can be expensive in terms of time and human resources, and automation is therefore a promising way to augment existing approaches. This article presents an extensive survey of usability evaluation methods, organized according to a new taxonomy that emphasizes the role of automation. The survey analyzes existing techniques, identifies which aspects of usability evaluation aut ...

<sup>2</sup> Evolutionary design of complex software (EDCS) demonstration days 1999

Wayne Stidolph

Wayne Stidolphi
January 2000 ACM SIGSOFT Software Engineering Notes, Volume 25 Issue 1

Publisher: ACM Press

Full text available: pdf(1.90 MB)

Additional Information: full citation, abstract, index terms

This report summarizes the Product/Technology demonstrations given at Defense Advanced Research Projects Agency (DARPA) Evolutionary Design of Complex Software (EDCS) Program Demonstration Days, held 28-29 June 1999 at the Sheraton National Hotel, Arlington, VA.

3 Astrolabe: A robust and scalable technology for distributed system monitoring,

management, and data mining

Robbert Van Renesse, Kenneth P. Birman, Werner Vogels

May 2003 ACM Transactions on Computer Systems (TOCS), Volume 21 Issue 2

Publisher: ACM Press

Full text available: Rpdf(341.62 KB)

Additional Information: full citation, abstract, references, citings, index terms

Scalable management and self-organizational capabilities are emerging as central requirements for a generation of large-scale, highly dynamic, distributed applications. We have developed an entirely new distributed information management system called Astrolabe. Astrolabe collects large-scale system state, permitting rapid updates and providing on-the-fly attribute aggregation. This latter capability permits an application to locate a resource, and also offers a scalable way to track sys ...

4 Lowering the barriers to programming: A taxonomy of programming environments

and languages for novice programmers Caitlin Kelleher, Randy Pausch

June 2005 ACM Computing Surveys (CSUR), Volume 37 Issue 2

Publisher: ACM Press

Additional Information: full citation, abstract, references, citings, index

Since the early 1960's, researchers have built a number of programming languages and environments with the intention of making programming accessible to a larger number of people. This article presents a taxonomy of languages and environments designed to make programming more accessible to novice programmers of all ages. The systems are organized by their primary goal, either to teach programming or to use programming to empower their users, and then, by each system's authors' approach, to makin ...

(SOSP'99)

Jay Lepreau, Eric Eide

April 2000 ACM SIGOPS Operating Systems Review, Volume 34 Issue 2

Publisher: ACM Press

Full text available: pdf(3.15 MB)

Additional Information: full citation, index terms

7 Document structure and content analysis 1: Towards XML version control of office

Sebastian Rönnau, Jan Scheffczyk, Uwe M. Borghoff

November 2005 Proceedings of the 2005 ACM symposium on Document engineering DocEng '05

Publisher: ACM Press

Full text available: R pdf(220.51 KB) Additional Information: full citation, abstract, references, index terms

Office applications such as OpenOffice and Microsoft Office are widely used to edit the majority of today's business documents: office documents. Usually, version control systems consider office documents as binary objects, thus severely hindering collaborative work. Since XML has become a de-facto standard for office applications, we focus on versioning office documents by *structured* XML version control approaches. This enables state-of-the-art version control for office documents. A basi ...

8 Software issues: Towards a software architecture for DRM

Sam Michiels, Kristof Verslype, Wouter Joosen, Bart De Decker

November 2005 Proceedings of the 5th ACM workshop on Digital rights management DRM '05

Publisher: ACM Press

Full text available: pdf(296.34 KB) Additional Information: full citation, abstract, references, index terms

The domain of digital rights management (DRM) is currently lacking a generic architecture that supports interoperability and reuse of specific DRM technologies. This lack of architectural support is a serious drawback in light of the rapid evolution of a complex domain like DRM. It is highly unlikely that a single DRM technology or standard will be able to support the diversity of devices, users, platforms, and media, or the wide variety of system requirements concerning security, flexibility, a ...

**Keywords**: DRM, software architecture

9 <u>Introductory tutorials: agent-based modeling: Tutorial on agent-based modeling and</u> simulation

Charles M. Macal, Michael J. North

December 2005 Proceedings of the 37th conference on Winter simulation WSC '05

Publisher: Winter Simulation Conference

Full text available: pdf(1.35 MB)

Additional Information: full citation, abstract, references

Agent-based modeling and simulation (ABMS) is a new approach to modeling systems comprised of autonomous, interacting agents. ABMS promises to have far-reaching effects on the way that businesses use computers to support decision-making and researchers use electronic laboratories to support their research. Some have gone so far as to contend that ABMS is a third way of doing science besides deductive and inductive reasoning. Computational advances have made possible a growing number of agent-bas ...

10 Using the Alfa-1 simulated processor for educational purposes

Gabriel A. Wainer, Sergio Daicz, Luis F. De Simoni, Demian Wassermann
December 2001 **Journal on Educational Resources in Computing (JERIC)**, Volume 1 Issue 4 **Publisher:** ACM Press

Full text available: pdf(238.65 KB) Additional Information: full citation, abstract, references, index terms

Alfa-1 is a simulated computer designed for computer organization courses. Alfa-1 and its accompanying toolkit allow students to acquire practical insights into developing hardware by extending existing components. The DEVS formalism is used to model individual components and to integrate them into a hierarchy that describes the detailed behavior of different levels of a computer's architecture. We introduce Alfa-1 and the toolkit, show how to extend existing components, and describe how ...

Keywords: DEVS formalism, modeling computer architectures, systems specification
